Summary

Mobile and Full-Stack Developer with 2 years of professional experience developing and maintaining cross-platform mobile and web applications. Currently working as a React Native Developer at CrocusZone and a Flutter Developer at JBMinds, with hands-on experience building applications for Android and iOS. Skilled in React Native, Flutter, React.js, PHP, and Laravel, with experience in API integration, backend development, and application maintenance. Strong focus on writing clean, maintainable code and building reliable, user-friendly solutions that align with business requirements.

Experience

- **React Native Developer,Crocus Zone,April 2026-Present**
  Lahore,Pakistan
- **Flutter Developer,JB Minds,Sep 2025-Present-(Part Time)**
  Lahore,Pakistan
- **Junior Flutter Developer,People AI,June 2025-Aug 2025**
  Lahore,Pakistan
- **Intern Flutter Developer,2B VisionTechnologies,Nov 2024-April 2025**
  Lahore,Pakistan

Key Projects

- IJBMTP (PHP Laravel, MySQL): Engineered a comprehensive web application that streamlined the entire journal publishing workflow by
  implementing secure role-based access control and an intuitive administrative interface. Successfully deployed at ijbmtp.com.
- Student Portal Mobile Application (React Native CLI) : Developed a comprehensive cross-platform mobile application designed to enhance the educational experience. Features include interactive student quizzes, real-time progress tracking, secure resource sharing, and seamless synchronization across devices.
- Neta-Ai Application (React Native Expo) :Executed a comprehensive UI/UX redesign of key application screens to significantly improve overall usability and establish a clearer visual hierarchy, resulting in enhanced user engagement and satisfaction metrics.
- QR Scanner and Generator (Flutter) : Developed a complete QR utility app featuring fast and accurate QR/Barcode scanning, custom QR generation, and a history tracker. Implemented advanced features such as push notifications, quote-to image conversion, and integrated sharing/copy options. Ensured a smooth and optimized user experience.
- Warehouse Application (Flutter) : Worked on the warehouse operations module similar to a PostEx-style logistics system, enabling efficient parcel handling and processing. Implemented key functionalities including parcel scanning, package status updates, inventory flow management, push notifications, and integration with backend APIs for real-time data synchronization. Focused on improving warehouse productivity and reliability through a clean and intuitive Flutter UI.
- Riders Application (Flutter) : Built a full-featured delivery rider app designed for managing and completing orders. Implemented functionalities such as fetching assigned orders, rider–order assignment workflows, live geo-location tracking, and capturing Proof of Delivery (POD) including signatures, images, and status updates. Ensured a reliable navigation experience and smooth communication with backend services to support an end-to-end delivery system.

- PDF ToolKits (Flutter) : Built a full-featured PDF management app for Android. Implemented functionalities such as scanning documents with CamScanner-style perspective crop and auto-filter, converting images to PDF, merging multiple PDFs, creating PDFs from scratch, and a built-in PDF viewer with editing tools including text, drawing, highlighting, and shapes. Integrated ML-based edge detection for automatic document corner detection, real-time filter previews, and multi-language support across six languages with full RTL layout for Arabic and Urdu.
- HealthfulAI (React Native CLI) : A health and budget management app for Android. Built a 7-day AI-generated meal planning system using Google Gemini with multi-provider fallback (OpenAI, Groq) and chunked generation to stay within token limits. Implemented regional pricing awareness, workout plan generation with exercise image matching from an open-source dataset, grocery list management with batched API saves, and a weekly budget tracking system. Features a custom slide-in drawer navigation, real-time macro breakdown, fitness goal tracking, AI-powered meal swap recommendations, and adaptive health recommendations. Integrated React Query for server state management, Redux Toolkit for auth and profile state, and AsyncStorage for offline resilience.
- G K S Transport LLC (React.js) : A high-performance commercial logistics and heavy equipment rental platform for a Dubai-based transportation firm. Built with React.js and styled for high conversion, featuring real-time fleet showcase for 119+ vehicles (sweet/salt/sewage tankers, tipper trucks, excavators), detailed service breakdowns, and dynamic interactive client trust grids. Integrated direct WhatsApp API routing, automated multi-channel lead capture forms, and an optimized mobile-first responsive layout to facilitate 24/7 client inquiries.
- The Baratie (React.js) : An immersive anime-themed digital storefront and interactive platform inspired by the One Piece universe. Built with React.js using component-driven architecture to deliver dynamic menu cataloging, customized thematic UI animations, and fluid navigation across multimedia features. Optimized for high-throughput performance with modern React state management, lazy-loading for image assets, dynamic filter systems, and responsive layout across mobile and desktop devices.

Education

- **BS Computer Science**

  NCBA&E 2021-2024

Core Technical Skills

Mobile & Cross-Platform Development : React Native, Flutter, Android SDK, iOS Development, Firebase, Mobile UI/UX Design

Frontend & Web Technologies: React.js, JavaScript, jQuery, HTML5, CSS3, Bootstrap, AJAX, Responsive Design

Backend & Database Technologies : PHP, Laravel, MySQL, RESTful API Development & Integration

Deployment, Monetization & Tools: Google Play Console, Google AdSense, Google AdMob, Git/GitHub, App Debugging & Maintenance
